Projects

- Narrow Domain Adaptation of Automatic Speech Recognition (ASR) Systems** [🔗] M.Tech Thesis
 > Worked on adapting existing general purpose CTC-based Automatic Speech Recognition (ASR) systems on narrow domains like Finance, Medical, E-Commerce, etc.
 > Explored inference-time approaches like constrained decoding using Class-Based Language Models.
- IndicPunct - Inverse Text Normalization for Indic Languages** [Code]
 > Worked on enhancing Weighted Finite State Transducer (WFST) based Inverse Text Normalization (ITN) System for 12 Indic Languages.
 > Deployed as a post-processor at various speech systems due to its capability of handling various colloquial forms efficiently.
- Indic-numtowords - Lightweight Text Normalization for Indic Languages** [Code]
 > Built a simple, lightweight Python package for text normalization for 13 Indic Languages.
- Voice Prescription** [Code] SIH Hackathon
 > An Android application designed to help small-scale doctors and clinics automate their writing process of medical prescriptions.
 > Instead of manually typing or writing the prescription, the app uses speech recognition, where the doctor only speaks to the app.
